

PROFESSIONAL SUMMARY

Proactive Entry-Level Data Analyst with strong technical competence in relational SQL querying (CTEs, window functions, schema design), Python statistical analytics (Pandas, NumPy, Scikit-Learn), and executive Business Intelligence reporting (Power BI, DAX, Tableau). Passionate about turning complex datasets into actionable business insights, automated workflows, and quantifiable value.

TECHNICAL SKILLS

Databases & SQL: SQL (PostgreSQL, MySQL), Complex Joins, Window Functions, CTEs, Aggregations, Query Tuning
Python & Analytics: Python, Pandas, NumPy, Scikit-Learn (Classification, Regression), Data Wrangling, EDA, Statistical Hypothesis Testing
BI & Visualization: Power BI, DAX Measures, Power Query, Data Modeling (Star Schema), Tableau Desktop, Seaborn, Matplotlib
Spreadsheets & Tools: Advanced Excel (XLOOKUP, Pivot Tables, What-If Analysis), Git/GitHub, Jupyter Notebooks, VS Code

EXPERIENCE & PRACTICAL ANALYTICS CONSULTING

Verified Roles & Engagements

Data Analytics Developer & Project Consultant • Independent Engagements

2023 – Present | Remote

- Engineered end-to-end data pipelines: extracted, cleaned, and normalized 100,000+ relational records with PostgreSQL CTEs and Python Pandas.
- Architected executive-facing Power BI dashboards with DAX calculated measures, identifying customer churn drivers and default mitigation strategies.

KEY DATA ANALYTICS PROJECTS

Code & SQL on GitHub

Financial Risk & Loan Default Analysis (SQL • Python • Power BI)

Code & SQL ↗

- Queried 15,000+ borrower loan accounts via PostgreSQL window functions; engineered credit risk tiers in Python with 84.2% ROC-AUC accuracy.
- Constructed an interactive Power BI dashboard tracking default rates, recovery metrics, and active loans for risk-mitigated lending decisions.

Customer Churn Prediction & Retention Analytics (Python • SQL • Scikit-Learn • Tableau)

Code & SQL ↗

- Audited 7,043 customer accounts; addressed contract churn drivers and class imbalance using SMOTE. Built Random Forest classifier identifying key churn predictors.
- Delivered a dynamic dashboard mapping customer lifetime value (LTV) against churn probabilities, projecting \$140k+ in annual recurring revenue retention.

CERTIFICATIONS & PROFESSIONAL CREDENTIALS

Online Verification Links

Microsoft Certified: Power BI Data Analyst Associate • Microsoft (PL-300 Credential)

SQL (Advanced) & Relational Database Certification • Verified Assessment & Query Optimization

Verify Credential URL ↗

EDUCATION

Bachelor of Technology • Computer Science & Engineering

Graduation: 2024

Relevant Coursework: Database Management Systems (DBMS), Statistics & Probability, Business Intelligence.
